

Day – 01

Objective of the Day:

The objective of the first day was to become familiar with the organization, learn about the extent of the internship, and initiate familiarization with the primary technology used in web development.

Activities Performed:

1) Orientation to Internship:

- Attended an introductory session about the company, team structure, and internship objectives.
- An overview of the resources, platforms, and tools that will be used for the entire duration of the internship.
- Description of the rules, responsibilities, and outputs associated with the internship.

2) Understanding Web Development:

- Talked about how web development is used in contemporary digital applications.
- Overview of web development types :
 - **Frontend Development** : JavaScript, HTML, and CSS
 - **Backend development** : PHP, MySQL, and other technologies
 - Complete Stack Development

3) Introduction to the Technology Stack:

- A synopsis of the equipment needed for the internship:
 - JavaScript, CSS, and HTML
 - For responsive design, use Bootstrap.
 - The development environment is Visual Studio Code.

My learnings :

The session began with an introduction to the frontend development stack, specifically focusing on the basics of HTML, the foundational language for creating web pages.

1. Introduction to HTML:

- Definition and role of HTML in web development.
- Understanding how HTML structures web content.
- Explanation of how browsers interpret HTML code.

2. Basic Structure of an HTML Document:

```
<html>
  <head>
    <title>Document</title>
  </head>
  <body>

  </body>
</html>
```

- **<!DOCTYPE html>**: Declares the document type.
- **<html>**: Root element of the HTML document.
- **<head>**: Contains meta-information like title, styles, etc.
- **<title>**: Sets the title shown on the browser tab.
- **<body>**: Contains the content that appears on the webpage.

3. Common HTML Tags Learned:

- **Headings**: **<h1>** to **<h6>**
- **Paragraph**: **<p>**
- **Line Break**: **
**
- **Horizontal Line**: **<hr>**
- **Anchor (link)**: **Link Text**
- **Image**: ****
- **List Tags**:
 - **Ordered List**: **Item**
 - **Unordered List**: **Item**
- **Formatting Tags**: ****, **<i>**, **<u>**, ****, ****

4. HTML Attributes:

- href, src, alt, title, style, id, class, etc.

Practical Activities:

LEARNING SESSION

TABLE

An HTML table is defined with a tag. Essential for clearly tabularly displaying data on web pages, tables are ordered sets of data arranged into rows and columns.

Breakdown of the key components of Table tags :-

- **<table>** : This tag defines the entire table structure.
- **<tr>** : This tag defines a table row within the table.
- **<th>** : This tag defines a table header cell, typically used for column or row titles.
- **<td>** : This tag defines a standard data cell within a table row.

Breakdown of the key components of Table attributes :-

- **border** : Defines the width of the border around the table and its cells.
- **cellpadding** : Adds space between the cell content and its border (inside padding).
- **cellspacing** : Adds space between individual table cells (outside spacing).
- **colspan** : Makes a cell span across multiple columns. Useful for merging cells horizontally.
- **rowspan** : Makes a cell span across multiple rows. Useful for merging cells vertically.

FORM

An HTML **form** is used to collect **user input**. Forms can include text fields, checkboxes, radio buttons, file uploads, etc., and usually submit data to a server.

Breakdown of the key components of Form Tags :-

- **<form>** : The main container tag for any form. Used to collect user input and send it to a server.
- **<input>** : The most common form element. Used to create fields like text boxes, radio buttons, checkboxes, submit buttons, etc.
- **<label>** : Provides a caption for inputs. Increases accessibility and usability.
- **<textarea>** : Used for multi-line text input (like comments, feedback, etc.).
- **<select>** : Creates a dropdown menu for selecting one or more options.
- **<option>** : Defines individual options inside a <select> dropdown.
- **<button>** : Creates a clickable button. Can be used to submit or reset the form.

Breakdown of the key components of Form Attributes :-

- **name** – Assigns a name to the input (used when sending data).

- **value** – Sets a default value.
- **placeholder** – Shows greyed-out text as a hint.
- **required** – Makes the input mandatory before form submission.
- **maxlength** – Sets the maximum character limit.
- **min / max** – Defines number or date range.

Practice Session :-

Week-1 - Day-2 – Code = calendar.html

Week-1 - Day-2 – Code = form.html

To complete this task, we need to integrate Google Maps into our HTML page to show a specific location.

Week-1 - Day-2 – Code => map.html

Output :-

Day – 3

CSS stands for Cascading Style Sheets. Think of HTML as the *structure* or *content* of your webpage (like the skeleton of a building), and CSS as the *decoration* or *styling* (like the paint, furniture, and overall aesthetic). CSS is used to control the layout, colors, fonts, and many other visual aspects of your website.

Types of CSS

There are three main ways to apply CSS to your HTML document:

1. Inline CSS:

- This type of CSS is applied directly to an individual HTML element using the style attribute.
- You put the CSS rules right inside the opening tag of the HTML element you want to style.
- **When to use :** Generally discouraged for larger projects because it mixes content and style, making your code harder to manage and update. Best for very small, one-off style changes.

```
<h2 style="color: blue; font-size: 24px;">Hello, Inline CSS!</h2>
<p style="color: green;">This paragraph is styled using inline CSS.</p>
```

2. Internal (or Embedded) CSS:

- This CSS is placed within a **<style>** tag in the **<head>** section of your HTML document.
- All the styles for a single HTML page are kept together in one place, separate from the content of the page itself.
- **When to use :** Useful for styling a single HTML page when the styles are not needed on other pages.

```
<html>
<head>
  <style>
    h1 {
      color: blue;
      text-align: center;
    }
    p {
      font-size: 16px;
    }
  </style>
</head>
<body>
  <h1>This is Internal CSS</h1>
```

```
<p>It is written inside the head section.</p>
</body>
</html>
```

3. External CSS:

- This is the most common and recommended way to apply CSS. The styles are written in a separate .css file and linked to the HTML file using the `<link>` tag.
- You create a file (e.g., styles.css) that contains all your CSS rules. Then, in the `<head>` section of your HTML file, you link to this external stylesheet using the `<link>` tag. This means one CSS file can style multiple HTML pages, making updates much easier.
- When to use: Ideal for websites with multiple pages, as it allows for consistent styling across the entire site and makes maintenance much simpler.

```
<html>
  <head>
    <link rel="stylesheet" href="external.css">
  </head>

  <body>
    <h1>This is External CSS</h1>
    <p>CSS is in a separate file.</p>
  </body>
</html>
```

//external.css file

```
h1 {
  color: green;
  text-align: left;
}

p {
  font-family: Arial, sans-serif;
}
```

Practice Session :-

Week-1 - Day-3 – Code => prac.html

Properties Of CSS :-

Text Styling...

- **color** → Sets the text color.
- **font-style** → Makes text *italic*.
- **font-weight** → Makes text **bold**.
- **font-size** → Changes text size.
- **font-family** → Changes the font type.
- **text-align** → Aligns text (e.g., center).

♦ Spacing & Layout

- **padding** → Adds space **inside** elements (like cells).
- **margin-top** → Adds space **above** an element.
- **width** → Sets the element's width (e.g., 50% of the container).

♦ Borders

- **border** → Adds a border around elements.
- **border-collapse** → Merges borders in tables.

OUTPUT :-

Day – 4

The world recognizes Bootstrap as its most widely used open-source front-end development framework. Bootstrap serves as the main framework to build mobile-first websites and web applications that respond properly across different devices with speed and efficiency. Twitter employees Mark Otto and Jacob Thornton created Bootstrap in 2011 before releasing it to the open source community to help developers build consistent user interfaces which work across various platforms and devices.

Why Bootstrap is Used?

- | **Mobile-First Design**
- | **Responsiveness**
- | **Cross-Browser Compatibility**
- | **Reusable Components**

Basic Properties / Components

- ❶ **Grid System** : Bootstrap uses a 12-column grid to help layout your page.
- ❷ **Buttons** : Bootstrap provides ready-made button styles.
- ❸ **Cards** : A card is a flexible content container with padding, border, and shadow.
- ❹ **Navigation** : Bootstrap helps create navbars easily.
- ❺ **Utility Classes** : Bootstrap provides small helper classes called utility classes that you can use for quick styling without writing CSS like Margin (m-3 : margin of 3 units), Padding (p-2 : padding of 2 units), Text color (text-danger : red text), Background color (bg-warning : yellow background), Text align (text-center : centered text).

Who to Installing Bootstrap:

We are the different ways to install Bootstrap:

Method 1: Using a CDN (Quickest method for development)

Add these links to your HTML file's **<head>** section:

```
<! -- Bootstrap CSS -- >

<link href="https://cdn.jsdelivr.net/npm/bootstrap@5.3.2/dist/css/bootstrap.min.css" rel="stylesheet">

<! -- Bootstrap Bundle with Popper (includes JS) -- >

<script src="https://cdn.jsdelivr.net/npm/bootstrap@5.3.2/dist/js/bootstrap.bundle.min.js"></script>
```

Method 2: Download Compiled Files

- Go to Bootstrap's official website
- Click "Download"
- Download the compiled CSS and JS files
- Add them to your project:

```
<link href="path/to/bootstrap.min.css" rel="stylesheet">
<script src="path/to/bootstrap.bundle.min.js"></script>
```

Bootstrap Screen Partition (Grid System) :-

The **Bootstrap Grid System** helps in dividing the screen into columns and rows, making it easier to design responsive layouts.

Grid Basics:

- Bootstrap uses a 12-column grid system.
- Rows are defined using `.row`.
- Columns are defined using `.col`, `.col-6`, `.col-md-4`, etc.
- The layout adjusts based on screen size.
- Responsive breakpoints available: sm, md, lg, xl, xxl.
- `.container` gives fixed-width layout.
- `.container-fluid` gives full-width layout.

Example: Responsive Columns

```
<div class="container">
  <div class="row">
    <div class="col-md-6">Half Width</div>
    <div class="col-md-6">Half Width</div>
  </div>
</div>
```

Above example gives 50-50 layout on medium or larger screens.

Bootstrap Card Layout :-

- Cards are content containers with padding, border, and optional image.
- Used to display content like text, image, title, links, and buttons.
- Created using `.card` class.
- Content is placed inside `.card-body`.
- Image is added using `.card-img-top`.
- Title uses `.card-title`.
- Paragraph text uses `.card-text`.

Basic Card Example

```
<div class="card" style="width: 18rem;">

  <div class="card-body">

    <h5 class="card-title">Card Title</h5>

    <p class="card-text">Some text inside the card.</p>

    <a href="#" class="btn btn-primary">Click Me</a>

  </div>

</div>
```

Practical Session : -

```
<html>
<head>
  <title>First Bootstrap</title>
  <link href="https://cdn.jsdelivr.net/npm/bootstrap@5.3.6/dist/css/
bootstrap.min.css" rel="stylesheet" integrity="sha384-4Q6Gf2aSP4eDXB8Mip
htr37CMZZQ5oXLH2yaXMJ2w8e2ZtHTL7GptT4jmdRuHDT" crossorigin="anonymous">
  <style>
    body {
      background-color: black;
      color: white;
```

```

    }

    .row {
        margin-top: 20px;
    }

    img {
        border-radius: 15px;
        box-shadow: 0 4px 8px rgba(255, 0, 0, 0.2);
    }

    marquee {
        color: rgb(255, 4, 4);
        font-weight: bold;
    }
</style>
</head>
<body>
    <center>
        <div class="row">
            <div class="col-lg-4"><br> <marquee><b>DEV YADAV<b></marquee><br>
            </div>
            <div class="col-lg-4"><br><marquee><b>DEV YADAV<b></marquee><br>
            </div>
            <div class="col-lg-4"><br><marquee><b>DEV YADAV<b></marquee><br>
            </div>
        </div>
    </center>
</body>
</html>

```

Output :-

Day - 5

Basic Properties Of Bootstrap :-

1) `.container` / `.container-fluid` :-

- Creates a responsive layout.
- `container` = fixed width
- `container-fluid` = full width

```
<div class="container">Fixed layout</div>

<div class="container-fluid">Full-width layout</div>
```

2) `.row` and `.col`

- Part of the **grid system**.
- Used to create columns.

```
<div class="row">

  <div class="col">Column 1</div>

  <div class="col">Column 2</div>

</div>
```

3) `.btn`, `.btn-primary`, `.btn-success`, etc.

- Bootstrap buttons with styles.

```
<button class="btn btn-primary">Primary</button>

<button class="btn btn-success">Success</button>
```

4) `.text-center`, `.text-start`, `.text-end`

- Aligns text inside elements.

```
<p class="text-center">Centered Text</p>
```

5) **.bg-success, .bg-danger, .bg-info**, etc.

- Adds background colors.

```
<div class="bg-success text-white p-2">Green Background</div>
```

6) **.m-3, .p-4, .mt-2, .px-5**, etc.

- Margin and padding utility classes.
 - **m** = margin, **p** = padding
 - **t, b, s, e, x, y** = directions (top, bottom, start/left, end/right, x-axis, y-axis)

```
<div class="p-3 m-2">Box with padding and margin</div>
```

7) **.card, .card-body, .card-title**

- Creates UI card components.

```
<div class="card">
  <div class="card-body">
    <h5 class="card-title">Card Title</h5>
    <p class="card-text">Card content goes here.</p>
  </div>
</div>
```

8) **.alert alert-warning / .alert-success**

- Creates alert boxes.

```
<div class="alert alert-warning">This is a warning alert!</div>
```

9) **.img-fluid, .rounded, .img-thumbnail**

- Styles images.

```

```

10) **.d-flex, .justify-content-center, .align-items-center**

- Flexbox utilities for layout alignment.

```
<div class="d-flex justify-content-center align-items-center">  
  Centered Content  
</div>
```

PRACTICAL SESSION...

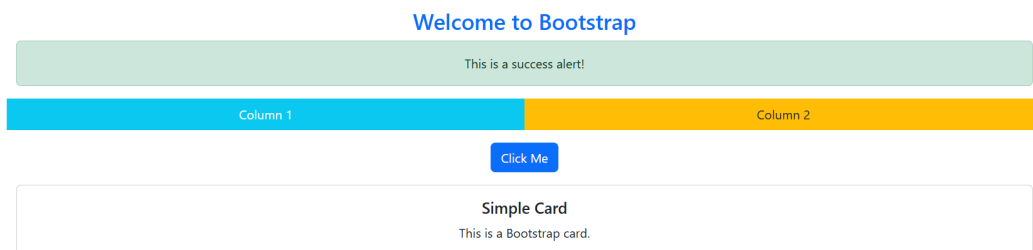

```
<html>  
<head>  
  <title>Bootstrap Demo</title>  
  <link href=  
"https://cdn.jsdelivr.net/npm/bootstrap@5.3.0/dist/css/bootstrap.min.css"  
rel="stylesheet">  
</head>  
<body>  
  <div class="container mt-4">  
    <!-- - Text Center and Alert - - >  
    <h3 class="text-center text-primary">Welcome to Bootstrap</h3>  
    <div class="alert alert-success text-center">This is a success  
alert!</div>  
    <!-- - Grid System - - >  
    <div class="row mb-3">  
      <div class="col bg-info text-white p-2">  
        <center>Column 1</center>  
      </div>  
      <div class="col bg-warning text-dark p-2">  
        <center>Column 2</center>  
      </div>  
    </div>  
  </div>
```

```

<!-- - Button - - >
<div class="text-center mb-3">
  <button class="btn btn-primary">Click Me</button>
</div>
<!-- - Card - - >
<div class="card text-center">
  <div class="card-body">
    <h5 class="card-title">Simple Card</h5>
    <p class="card-text">This is a Bootstrap card.</p>
  </div>
</div>
</div>
</body>
</html>

```

Output :-

We Are Create A Resume :-

```

WEEK - 2

DAY - 1

Purpose :-

The project's primary objective focuses on connecting present-day learners with future occupations which will be controlled by artificial intelligence. The quick development of Artificial Intelligence requires essential guidance for students to acquire vital skills and discover promising career trajectories. Through this platform students can explore AI-related career possibilities which align with their interests and academic records and technical abilities.

Tagline:

“Bridging Today’s Students with Tomorrow’s AI Career – because every skill deserves a future.”

Key Features Planned :-

- ➔ **Career Prediction Form:** Users input field, domain, and skills.
- ➔ **Smart Suggestions:** Real-time skill suggestions based on selected fields (JavaScript).
- ➔ **Career Output:** AI-based predictions of suitable future careers.
- ➔ **Interactive Charts:** Visualize job trends and industry growth (Chart.js).
- ➔ **Resume Upload (*Optional*):** For future resume analysis.
- ➔ **Profile System (*Future*):** Save user data and preferences.
- ➔ **Responsive Design:** Bootstrap-based layout for all devices.

Tech Stack Used:

- ➔ **HTML5** – For creating structured web pages.
- ➔ **CSS3** – For custom styling and layout designs.
- ➔ **JavaScript** – For interactivity, dynamic form options, and logic-based predictions.
- ➔ **Bootstrap 5** – For responsive design and ready-to-use UI components.

DAY - 2

On the first day of project development, I began with the hands-on coding of our project by coding the main homepage file (home.php). The focus was on developing the overall structure, design, and functionality of the landing/home page of the website. This involved coding and organizing PHP, HTML, and CSS code and making the page responsive and well-linked in the project directory.

Styling and UI Decisions

- Used Bootstrap CSS framework for grid system, spacing, and responsiveness.
 - Font and color scheme were professional and clean to match the technical tone of the project.
 - Placeholder content and images inserted to be overwritten in later stages.
-

.hero

- **Purpose:** Styles the main background section of your webpage.
- **Where it's used:** The big area with the rocket and buttons.

```
.hero {  
  padding: 100px 20px;  
  background: url('stars-background.png') repeat;  
  background-size: cover;  
  position: relative;  
  min-height: 100vh;  
}
```

Properties Explained :

padding: 100px 20px;

- Adds space inside the div: 100px top/bottom and 20px left/right.

background: url(...) repeat;

- Sets a background image that repeats across the section.

background-size: cover;

- Stretches the background to fully cover the section.

position: relative;

→ Used for positioning child elements (if any) absolutely inside this div.

min-height: 100vh;

→ Sets the minimum height to 100% of the viewport (screen height).

.rocket

- **Purpose** : Animates the rocket to fly up and down.
- **Where it's used** : On the rocket image.

```
.rocket {  
  width: 80px;  
  animation: flyUp 1s ease-in-out infinite alternate;  
  margin-bottom: 20px;  
}
```

Properties Explained :

width: 80px;

→ Sets the rocket image's width.

animation: flyUp 1s ease-in-out infinite alternate;

→ Applies the animation called flyUp:

- ‖ **1s** duration
- ‖ **ease-in-out** for smooth speed
- ‖ **infinite** = loops forever
- ‖ **alternate** = moves up then down repeatedly

margin-bottom: 20px;

→ Adds space below the rocket image.

@keyframes flyUp

- **Purpose** : Defines how the rocket moves in the animation.

```
@keyframes flyUp {  
  0% { transform: translateY(0); }  
  100% { transform: translateY(-20px); }  
}
```

Properties Explained :

transform: translateY(...)

- Moves the rocket up (-20px) or down (0) vertically.
 - This creates a flying effect.
-

.buttons

- **Purpose :** Styles the button container to be responsive and spaced.

```
.buttons {  
  display: flex;  
  justify-content: center;  
  gap: 20px;  
  flex-wrap: wrap;  
}
```

Properties Explained :

display: flex;

- Turns the container into a flexbox layout.

justify-content: center;

- Aligns all buttons to the center horizontally.

gap: 20px;

- Adds 20px of space between buttons.

flex-wrap: wrap;

- Allows buttons to move to the next line on smaller screens.
-

.btn

- **Purpose :** Custom style for links to look like futuristic glowing buttons.

```
.btn {  
  background: rgba(255, 255, 255, 0.1);  
  border: 1px solid #ffffff22;  
  color: white;  
  padding: 15px 25px;
```

```
border-radius: 12px;  
text-decoration: none;  
font-weight: bold;  
transition: background 0.3s, transform 0.3s;  
}
```

Properties Explained :

background: rgba(255,255,255,0.1);

→ Transparent white background with 10% opacity.

border: 1px solid #ffffff22;

→ Thin semi-transparent white border.

color: white;

→ Sets button text color to white.

padding: 15px 25px;

→ Adds space inside the button (top-bottom: 15px, left-right: 25px).

border-radius: 12px;

→ Rounds the button corners.

text-decoration: none;

→ Removes underline from link text.

font-weight: bold;

→ Makes button text bold.

transition: background 0.3s, transform 0.3s;

→ Smooth animation when hovering (0.3 seconds).

.btn:hover

- **Purpose :** Creates a hover effect with glow and scale.

```
.btn:hover {  
  background: #3d5afe;  
  transform: scale(1.1);  
  box-shadow: 0 0 20px #3d5afeaa, 0 0 40px #3d5afe44;  
}
```

```
animation: pulse 1s infinite;
}
```

Properties Explained :

background: #3d5afe;

→ Changes background to neon blue when hovered.

transform: scale(1.1);

→ Slightly enlarges the button.

box-shadow: ...;

→ Adds glowing shadow effect around the button.

animation: pulse 1s infinite;

→ Applies a continuous pulsing effect.

@keyframes pulse

- **Purpose :** Animates the button glow effect.

```
@keyframes pulse {
  0%   { transform: scale(1.08); }
  50%  { transform: scale(1.12); }
  100% { transform: scale(1.08); }
}
```

Properties Explained:

transform: scale(...)

→ Makes the button grow and shrink smoothly in a loop.

→ This creates a “breathing” glow effect.

.nav-link

- **Purpose :** Sets navbar link color to white and adds hover effect (not shown visually in your current page).

```
.nav-link {
```

```
color: white !important;
}

.nav-link:hover {
  color: #ccc !important;
}
```

Properties Explained...

color: white !important;

➔ Forces white color on navbar links.

:hover selector

➔ Changes color on hover to light gray **#ccc**.

The homepage was successfully structured with all primary sections in place. The code was organized using include files for scalability. This foundational work sets the stage for further feature integration such as user login, form processing, and prediction logic in the coming days.

DAY - 3 :- Create a About Us page Structure

About Us (Introduction) :-

The **About Us** page of the **Future Career Prediction** website presents the background, objectives, team, and vision of the project in an organized and responsive design. It's a narrative gateway between the visitor and the platform, a helpful introduction that answers who, what, why, when, where.

Company Introduction

The "**About Future Career Prediction**" section explains the main purpose of the website. It helps students, professionals, and job seekers make smart career choices by showing possible future job opportunities. The content talks about how changes in technology and the job market can affect career paths, guiding users to plan better for a successful future.

Meet the Team

Following this is a section titled "Meet the Team", there you will find the lead members, made up of the scientists and developers that are responsible for the creation and research of the medium. We look like a pack of idiots Each member of the team will have a profile card that includes:

- ➔ A photo (with hover effects),
- ➔ Their name,
- ➔ And whether or not, or if, they are a Developer, Researcher, etc.

This part features the responsive grid layout, combined with subtle animations to make the team introduction modern and highly professional. It can instill transparency and trust among users.

Vision and Mission

Page is fundamentally characterized by the Vision and Motto section, containing two columns.

The Vision outlines the project's long-term ambition:

“To create a world where no professional is left behind.”

- It highlights goals such as upskilling the workforce, evolving educational systems, and improving access to career intelligence.

The Mission explains how the project will achieve its goals:

“To equip individuals with personalized roadmaps to succeed in future careers.”

- It offers career prediction, data visualization and platform performance.

This section is well arranged hover effect and smooth animation & it increase the readability and smart look.

Gallery section

The Gallery section shows real pictures or mockups from the development journey. Each photo is displayed in a card with smooth corners and a zoom effect when you hover over it. This section adds a personal and creative feel to the website and gives visitors a look at the team’s work, process, and environment.

Our Innovation

The Innovation section emphasizes the uniqueness of the platform and how it stands out from traditional career guidance tools. It mentions the use of:

- Real-time analysis of industry demands,
- User-specific recommendations, and
- A platform designed for students, professionals, and career changers alike.

This content reassures users that the website is focused on providing timely and relevant career direction, ensuring they stay aligned with job market demands.

Our Journey (Timeline)

The last content area is “Our Journey”, a timeline sequential format. The following is a brief summary of the main stages of the work:

- January 2025 – Idea Born
- February `2025 - Research & Data Gathering
- April 2025 – Development Begins
- June 2025 – Launch

Each milestone is presented using a vertical timeline layout with fade and zoom animations, helping visitors understand the website’s evolution in a simple and visually engaging way.

Design & Interactivity Highlights

- Responsive design with Flexbox and Bootstrap
 - AOS library animations
 - Fullscreen Hover effects in team profile, gallery image, timeline element
 - A fresh, clean font and color palette with a modern dark theme
 - Custom css for headers, paragraphs and image cards
-

We are Added CSS Classes & Animations & Properties in About Us Page

.about-content

- **Purpose:** Styles the main introductory section of the **About Us** page.
- **Where it's used:** Around the intro paragraph and mission statement at the top of the page.

```
.about-content {  
  padding: 100px 20px 100px;  
  max-width: 900px;  
  margin: auto;  
}
```

```
text-align: center justify;
}
```

Properties Explained:

padding: 100px 20px 100px;

→ Adds space: 100px top/bottom, 20px left/right.

max-width: 900px;

→ Restricts the content width for readability.

margin: auto;

→ Centers the div horizontally.

text-align: center justify;

→ Text is both centered and justified.

.team-member:hover

- **Purpose:** Creates an interactive hover effect on team cards.
- **Where it's used:** On individual team profiles like "Dev Yadav".

```
.team-member:hover {
  background: #292962;
  transform: scale(1.05);
  transition: all 0.3s ease;
  box-shadow: 0 8px 20px rgba(0, 0, 0, 0.3);
}
```

Properties Explained:

background: #292962;

→ Changes background color on hover.

transform: scale(1.05);

→ Slight zoom effect.

transition: all 0.3s ease;

→ Smooth transition when hovering.

box-shadow;

→ Adds a soft shadow for depth.

.gallery-item img:hover

- **Purpose:** Adds hover animation to gallery photos.
- **Where it's used:** In the Gallery section.

```
.gallery-item img:hover {  
  transform: scale(1.1);  
  transition: transform 0.3s ease;  
  border: 2px solid #a0c4ff;  
}
```

Properties Explained:

transform: scale(1.1);

→ Grows image slightly when hovered.

transition: transform 0.3s ease;

→ Smooth zoom animation.

border: 2px solid #a0c4ff;

→ Adds glowing blue border effect.

.aos-fade (Used with AOS Library)

- **Purpose:** Triggers fade-up animation on scroll.
- **Where it's used:** On every key section (`.about-content`, `.vision-mission`, etc.)

```
<div class="aos-fade" data-aos="fade-up" data-aos-duration="3000" data-aos-  
delay="300"></div>
```

Properties Explained:

data-aos="fade-up"

→ Animation type: fade from bottom upwards.

data-aos-duration="3000"

→ Duration: 3 seconds.

data-aos-delay="300"

→ Starts animation 300ms later.

data-aos-anchor-placement="top-bottom"

→ Animation triggers when top of element meets bottom of screen.

.vision-box:hover / .mission-box:hover

- **Purpose:** Adds visual effect when hovering over the Vision and Mission boxes.
- **Where it's used:** In the Vision & Mission section.

```
.vision-box:hover,  
.mission-box:hover {  
  background-color: #101030;  
  color: #a0c4ff;  
  padding: 25px;  
  border-radius: 12px;  
  transition: background 0.4s, color 0.4s;  
}
```

Properties Explained:

background-color: #101030;

→ Darkens background.

color: #a0c4ff;

→ Changes text color on hover.

transition: background 0.4s, color 0.4s;

→ Smooth animation for color/background.

The About Us page of the Future Career Prediction website clearly explains what the platform is about, who is behind it, and how it has grown. It is easy to read, looks good, and includes simple animations. The neat layout and useful content help users trust the website, understand its goals, and see it as a professional and reliable platform.

DAY - 4

Contact Page Structure & Components

The Contact Us page is an important part of the Future AI Career Prediction site. It is a messenger between the users and the developers. The page is meant to be modern, responsive, interactive, with a lot of various ways for users to contact, ask questions, give feedback, and make suggestions.

Structural Components :-

A Contact Us page of the Future AI Career Prediction website design layout modelled in three main sections as follows. Every part has its own intention to increase the engagement, conversation, and credibility amongst user. Some points on each portion:

1. Message Form Section
2. FAQ Section (Frequently Asked Questions)
3. Contact Cards Section

Message Form

The Message Form is a primary channel for communication between the users and platform team. It begins with a “Send a Message” heading and includes a **responsive form** with fields such as Full Name, Email, Subject, and Message—all styled using modern glassmorphism effects.

- ➔ The Full Name and Email fields are required, to avoid any nonsense entered by the user.
- ➔ Subject: dropdown, with fields like Career Guidance, Technical Support, and Feedback, so that the query can more accurately be classified.
- ➔ The Message field is a big textarea to help stimulate detailed input.
- ➔ There’s even a box that allows you to subscribe to a newsletter and opt-in for updates about AI careers.
- ➔ Submit Button with Hover Animation and Transitions A submit button with hover effects and transition effects for css to make more interaction and user friendly.
- ➔ Whole form is responsive and works well with mobile phones.

FAQ Section

The FAQ section is a handy part for users seeking fast responses for typical questions, except to increase user satisfaction and lighten your support load.

Each FAQ is presented as an accordion item, on clicking a question, the answer is shown/hidden using toggle logic in JavaScript with smooth animation with CSS max-height transitions.

The prompts include:

- ➔ AI prediction accuracy
- ➔ User information requirements
- ➔ Expected response time
- ➔ Career counseling availability
- ➔ Data security and privacy

Contact Cards

You can also find other ways to contact us on our Contact Cards Page Contact Cards Page Contact us in a set of animated responsive cards.

There are three contact options:

- ➔ Email Us – contact@futurecareer.com We promise to respond within 24 hours
- ➔ Call Us -+91 98765 43210 Mon–Fri, 10AM–6PM IST professional feel to the section.
- ➔ Meet us – AI Innovation Hub, Bangalore to discuss in person.

Its features include hover animations, scaling, and more information shown on hover. The design itself relies on a CSS grid so that it remains fully responsive across different devices. Also, cards pop-in with stagger animation and all this and small details that make it look professional and dynamic.

We are Added CSS Classes & Animations & Properties in Contact Us Page

.container

```
.container {  
  padding: 160px 20px 100px;  
  max-width: 1000px;  
}
```

```
margin: auto;
position: relative;
overflow: hidden;
}
```

Properties Explained:

padding: 160px 20px 100px;

→ Top: 160px, Left & Right: 20px, Bottom: 100px spacing around content.

max-width: 1000px;

→ Prevents content from stretching too wide on large screens.

margin: auto;

→ Centers the container horizontally.

position: relative;

→ Enables absolute positioning for any inner elements if needed.

overflow: hidden;

→ Hides content that overflows the container boundary.

.message-form

```
.message-form {
  background: rgba(255, 255, 255, 0.05);
  padding: 25px;
  border-radius: 10px;
  max-width: 600px;
  margin: 0 auto;
  width: 100%;
  animation: fadeIn 1s ease-in;
  position: relative;
}
```

Properties Explained :

background: rgba(255, 255, 255, 0.05);

→ Adds a soft transparent white background.

padding: 25px;

→ Adds spacing inside the form.

border-radius: 10px;

→ Smoothly rounds the form's corners.

max-width: 600px;, width: 100%;

→ Responsive form width up to 600px.

animation: fadeIn 1s ease-in;

→ Makes the form fade in with smooth upward motion.

.form-control

```
.form-control {  
  width: 100%;  
  padding: 12px;  
  border-radius: 8px;  
  border: 1px solid rgba(255, 255, 255, 0.1);  
  background: rgba(255, 255, 255, 0.05);  
  color: white;  
  font-size: 14px;  
  box-sizing: border-box;  
  transition: all 0.3s ease;  
}
```

Properties Explained :

padding: 12px;

→ Comfortable spacing inside inputs.

border-radius: 8px;

→ Smooth input edges.

background & border:

→ Soft translucent background and border.

color: white;, font-size: 14px;

→ Light, readable text style.

transition: all 0.3s ease;

→ Smooth animation on hover/focus.

.btn-submit

```
.btn-submit {  
  background: #3d5afe;  
  color: white;  
  padding: 12px 20px;  
  border: none;  
  border-radius: 8px;  
  cursor: pointer;  
  transition: all 0.3s ease;  
  width: 100%;  
  font-size: 16px;  
}
```

Properties Explained :

background: #3d5afe;, color: white;

→ Creates a vivid blue button with white text.

border: none;, border-radius: 8px;

→ Removes border and rounds the corners.

transition: all 0.3s ease;

→ Adds smooth hover effect.

cursor: pointer;, width: 100%;

→ Full-width clickable button with pointer cursor.

.contact-card + Animation

```
.contact-card {  
  background: rgba(255, 255, 255, 0.05);  
  padding: 20px;  
  border-radius: 10px;
```

```
transition: all 0.3s ease;
border: 1px solid rgba(255, 255, 255, 0.1);
opacity: 0;
animation: popIn 0.5s ease forwards;
}
```

Properties Explained :

opacity: 0;, animation: popIn

→ Cards animate from hidden to visible.

transition & hover:

→ On hover, transforms, border glows, and text moves slightly.

.faq-item + .faq-answer

```
.faq-answer {
  max-height: 0;
  overflow: hidden;
  transition: max-height 0.3s ease;
}
.faq-item.active .faq-answer {
  max-height: 100px;
}
```

Behavior :

When **.faq-item** gets **.active** class (via JS toggle):

→ The hidden answer is revealed with a smooth height transition.

Animations

fadeIn

```
@keyframes fadeIn {
  from {
    opacity: 0;
    transform: translateY(20px);
  }
}
```

```

    }
    to {
      opacity: 1;
      transform: translateY(0);
    }
  }
}

```

→ **Effect:** Smooth fade and upward motion on load.

popIn

```

@keyframes popIn {
  from {
    opacity: 0;
    transform: scale(0.95);
  }
  to {
    opacity: 1;
    transform: scale(1);
  }
}

```

→ **Effect :** Zoom-in style entrance for each contact card with delay.

burst (for particle effect, if used)

```

@keyframes burst {
  0% {
    transform: translate(0, 0);
    opacity: 0.7;
  }
  100% {
    transform: translate(var(--tx), var(--ty));
    opacity: 0;
  }
}

```

→ **Effect :** Simulates animated glowing particles dispersing.

DAY - 5

CREATING HEADER AND FOOTER CODE

Header Section – Design and Implementation

This header was designed using HTML with bootstrap 5 in order to make a nice header fixed top navigation menu with the same look and feel as the one on the website.

Key Features :

From here, the header area includes the site logo, menu links and responsive features. It's used inside a header tag with a radial gradient in a black to dark blue gradient to make it look a bit more modern and tech-centered.

- ➔ The logo is floated to the left with a flex layout. It is joined by a very strong brand title: “FutureCareer”.
- ➔ The nav bar features the three main links being Home, About, and Contact, and they are designed to have white color their hover effects, part of the custom CSS.
- ➔ On smaller screens the navigation is responsive and a burger menu appears using Bootstrap’s collapse classes.
- ➔ Whole header is fixed at top (position: fixed) and user is capable of accessing navigation everywhere where he scrolls.

Structure and Layout

The header is implemented inside a **<header>** tag and styled to stay fixed at the top of the screen. It uses the **Bootstrap navbar** component.

```
<header style="padding: 20px; background: radial-gradient(...); position: fixed; ...">
  <nav class="navbar navbar-expand-lg">
    ...
  </nav>
</header>
```

Bootstrap Classes Used

- ➔ **navbar** : Base class for building the navigation bar.
- ➔ **navbar-expand-lg** : Enables horizontal menu on large screens and collapses into a hamburger menu on small screens.
- ➔ **navbar-toggler** : The button to click to reveal the collapsed menu.

- **collapse navbar-collapse** : Contains the navbar-item that is going to collapse.
- **navbar-nav ms-auto** : navbar-nav contains nav items, ms-auto (margin-start: auto) sends them to the right.
- **nav-item, nav-link** : For single menu links.

CSS Styling Used

```
.nav-link {  
  color: white !important;  
}  
.nav-link:hover {  
  color: #ccc !important;  
}  
.navbar-brand {  
  color: white !important;  
}
```

Explanation :

- **.nav-link** : Gives color white to the links by using !important to override Bootstrap defaults.
- **:hover** : Sets the interaction feedback to light gray.
- **.navbar-brand** : It is applying white text color to the logo name.

Visual Elements :

- A **logo image (logo.png)** with custom height (**40px**) is shown next to the brand name.
- Font size for the brand title is set inline (**font-size: 22px; font-weight: bold;**).

Footer Section - Design and Development

The Bottom bar was introduced into most pages as a way of delivering useful information, contacts and shortcuts so that users don't have to go hunting through pages to find it.

Key Features :

- For the footer I use radial-gradient background to match the header and keep a consistency in design throughout the site.
- Footer has the brand name and heading “Future Career Prediction” at the left.
- On the right, its social media section includes links with icons to Facebook, Instagram, X (Twitter), LinkedIn, and WhatsApp.
- Below, it presents three columns:
 - ◆ Company Links: Home, About, Contact, Pricing, Team.
 - ◆ Documentation: This consists of Help Center, FAQ, Privacy policy and Terms & Conditions.
 - ◆ Contact Details: Includes the official email address (futurejob@career.com) and the address (Bhavsinhji Polytechnic Institute, Bhavnagar)
- It utilizes Bootstrap grid system for responsive layout.
- The all text is in white color and clear font size and spacing wherever necessary for spectacular legibility

Structure and Layout

The footer uses Bootstrap’s grid system to organize content into responsive columns.

```
<footer>
  <div class="container">
    <div class="row"> ... </div>
    <div class="row"> ... </div>
    <hr>
    <p class="text-center">...</p>
  </div>
</footer>
```

Bootstrap Classes Used :

- **container** : Wraps the content with padding and center alignment.
- **row, col-md-6, col-md-3, col-6** : Responsive grid system to divide the layout into columns.
- **d-flex, justify-content-center, align-items-center** : Flexbox utilities for centering content.
- **list-unstyled** : Removes default list styling for clean menu links.
- **text-center** : Aligns copyright.

Custom CSS Components Used

```

.footer-logo {
    margin-top: -55px;
    height: 70px;
    width: 70px;
}

footer {
    padding: 40px 20px;
    font-family: 'Segoe UI', sans-serif;
    background: radial-gradient(ellipse at center, #000000 0%, #00003c 100%);
    color: #ffffff;
    font-size: 14px;
    margin-top: 80px;
    text-align: left;
}

.text-dark {
    color: white !important;
    display: flex;
    margin-left: 5px;
    gap: 35px;
    font-size: 12px;
    text-decoration: none;
}

.footer img {
    height: 40px;
    margin: 0 10px;
    vertical-align: middle;
}

```

Visual Elements in Footer :

- Logo section with name and subtitle:
 - **FutureJob - Career Prediction**
- Social icons with links to:
 - Facebook, Instagram, X (Twitter), LinkedIn, WhatsApp
- Useful Links grouped under:
 - Company, Documentation, Others (Email and Address)
- Email Link:

→ futurejob@career.com
